DOCUMENTATION

This is the IATI Docs Base. It documents the **Widgets API** with an interactive reference — a renderer trial using Swagger UI, rendered **natively** by the swagger-plugin-for-sphinx extension (a real Sphinx directive; assets pinned and mirrored into the build, no CDN at load time). It has a built-in "try it out" console.

Note

The "try it out" console sends real requests. Against a live API it needs CORS enabled on the server (or a proxy).
